

## TallyPrime 5.1

**NEW**

Advanced e-Way bill & GST returns

**NOW LIVE!**

Dear Professional,

We are happy to announce the availability of **TallyPrime Release 5.1**.

[Download Now](#)

The release comes with the following enhancements:

### Advanced e-Way Bill Generation

- Automatically populate '**PIN to PIN Distance**' on **e-Way bill** generation by leaving the distance field blank when unsure.
- Seamless e-Way bill generation for job workers handling Material In and Out transactions.
- Accurate e-Way bill generation for export invoices with the correct state and pin code details, ensuring compliance.

### Enhanced GST Compliance & User Control

- Changes to master data that result in conflicts, no longer affect GST status updates, ensuring return values remain intact and reducing the risk of compliance errors.
- Vouchers can be updated with the latest master values only when necessary, allowing for intentional and controlled modifications.
- Notifications about changes during GST data exchanges, such as uploads, e-Way bill generation, and e-Invoice creation, help minimise the risk of accidental errors.

### Quick GST Migration Setup

- For customers upgrading from TallyPrime Release 2.1 and below, a flexible voucher numbering option is now available. This allows users to retain the current voucher numbering method before migrating to this release.

- Adjust HSN summary applicability for B2C transactions and customise HSN length as per requirements, making the transition smoother and aligned with business rules.

### Streamlined GST Return Preparation

---

- Quickly convert multiple transactions rejected due to inactive GSTINs, ensuring faster error resolution.
- New option to export GSTR-1 for customisable periods as needed, alongside monthly/quarterly exports.
- Previously 'Accepted As Is' transactions now remain 'Included' unless GST properties of a voucher are changed, ensuring all filed returns remain intact unless any modifications are made to the transaction.
- Compliance with the latest GST filing rules for a smoother return experience.

### GSTR - 2B Reconciliation

---

- GSTR - 2B Reconciliation is enhanced to support the latest GSTN API changes.
